Year in Review

2025

Message from the CEO

Marnie Webb
CHIEF EXECUTIVE OFFICER

Dear friends, partners, and members of civil society,

Fiscal year 2025 was a year of intense pressure and necessary transformation for the global civil society sector. As nonprofit organizations, we navigated a landscape defined by political instability, shifting public policy, volatile funding environments, and escalating threats to our data and operations.

In the face of these challenges, one question animated our entire organization: **How do we support civil society organizations — particularly the smallest and least resourced — to access necessary resources and adopt and optimize technology in ways that are both affordable and sustainable?**

We believe the answer lies in the power of the community to come together and work in collaboration. The hard problems of our time — from climate change to food security — are interconnected and demand massive coordination in response. Our work is therefore centered on building the robust, resilient digital backbone the entire sector needs.

Through programs like the **Digital Activism Program**, we reached over 8,200 people directly. In turn, these people reached another 7.6 million, equipping civil society organizations to counter disinformation and strengthen their digital resilience. We also invested in producing a series of landscape briefs, providing actionable intelligence to funders and partners.

Our **NGOsource** program continued to serve as indispensable infrastructure for cross-border philanthropy, achieving a **17.4 percent growth** in equivalency determinations (EDs) and saving grantmakers an estimated \$25 million in operational costs through its repository of nearly 12,000 EDs globally.

We also launched the AI for Social Change upskilling initiative for 10,000 organizations across 10 countries, positioning the sector to leverage this emerging technology responsibly.

It is through our Marketplace and essential validation services that we realize the broadest part of our mission. In fiscal year 2025 alone, we connected 305,000 civil society organizations globally with over 554,000 hardware and software licenses. This effort delivered a total value of US \$2.6 billion to the sector, demonstrating the critical role our platform and enabling partnerships play in ensuring that technology is both accessible and affordable worldwide.

Like so many organizations we serve, TechSoup was impacted by the global shifts and challenges facing civil society. We made a critical decision to undergo a strategic transformation of our operating model to ensure long-term financial sustainability. This involved structural changes, including shifting to a direct distribution model where possible, and prioritizing support that allows organizations to manage and adopt technology to be as resilient as possible.

I am pleased to report that these changes are beginning to pay off. At the close of fiscal year 2025, we achieved a surplus, reporting a **net income of \$3,896,188**. This positive result is a testament to the hard work of our staff and partners, and it allows us to build the capacity to continue our change journey, ensuring we can sustain our mission to serve the sector well into the future.

In a complex world, we remain committed to standing on the side of inclusion and civil society, globally. We look forward to continuing to work in concert, running toward the hard problems on behalf of our missions and our communities.

In partnership,

A handwritten signature in dark ink, appearing to read 'M Webb', with a small circular mark to the left.

Marnie Webb
CHIEF EXECUTIVE OFFICER

Our Commitment

Since 1987, our mission has been to build a dynamic bridge that leverages technology to enable connections and innovative solutions for a more equitable planet.

TechSoup stands alongside those working to uplift their communities. We are driven to support those organizations that struggle to access technology resources, connect with helpful partners, or need advice. In fact, the organizations that benefit most from TechSoup are often the smallest and hardest to reach.

As a nonprofit ourselves, we're committed to being a trusted partner to hundreds of thousands of other mission-driven organizations as they access, adopt, and use a wide variety of digital solutions, empowering them to carry out the unique and vital work our sector does every day.

Since our founding nearly 40 years ago, TechSoup has enabled more than **1.6 million** civil society organizations in **234 countries and territories** to receive the retail value of **US \$27 billion** in technology tools, resources, and funding.

Our Impact in Action

Throughout 2025, civil society operated in a high-stakes environment shaped by instability, regulatory changes, and fluctuating funding streams.

Nonprofits were the second-most targeted sector in 2024, surpassed only by the energy, mining, oil, and gas sector, according to [Okta's Nonprofits at Work](#). At the same time, many corporations, grappling with economic and political uncertainty, redirected priorities toward artificial intelligence and core business profitability, often reducing their commitment to philanthropy.

While some funders stepped in to bridge gaps, others withdrew or redirected where their dollars went, placing additional strain on an already resource-constrained sector.

In response to this complex environment, TechSoup concentrated on two key areas where we could deliver the greatest impact to the sector:

- 1. Supporting nonprofit organizations** in getting access to affordable technology solutions and services to strengthen their security, resilience, and efficiency
- 2. Strengthening the nonprofit sector** by building the resources and advocacy necessary for it to thrive

Source: Shutterstock

Supporting Nonprofit Organizations

TechSoup is focused on the urgent needs of small, grassroots organizations, which play a vital role in delivering the everyday services necessary within communities, fostering civic engagement, and often driving sustainable, community-rooted change. Positioned closest to the communities they serve, these nonprofits often see problems first. In fact, their small size enables them to pivot quickly and respond to new challenges as they arise.

Small organizations require more than access to technology — they need guidance, expertise, and time-saving support to make informed decisions, maximize investments, and unlock the full potential of their existing tools. This year, we deepened our commitment to serve organizations as their essential, strategic technology partner. Across the organizations we provided with technology resources, 84 percent operated with budgets US \$1 million and below, and 91 percent had budgets under US \$2 million. This work does not happen alone. It happens with critical partners across the globe — partner organizations who know their communities, who know technology, and who are committed to providing ongoing support.

This year, we supported organizations by:

Empowering

nonprofits with access to technology tools at significant cost savings

Connecting

nonprofits with affordable service providers to support their technology implementation, maintenance, and project support

Educating

nonprofits on key skills, trends, and issues to ensure they can take best advantage of solutions for their success, resiliency, and security

Driving

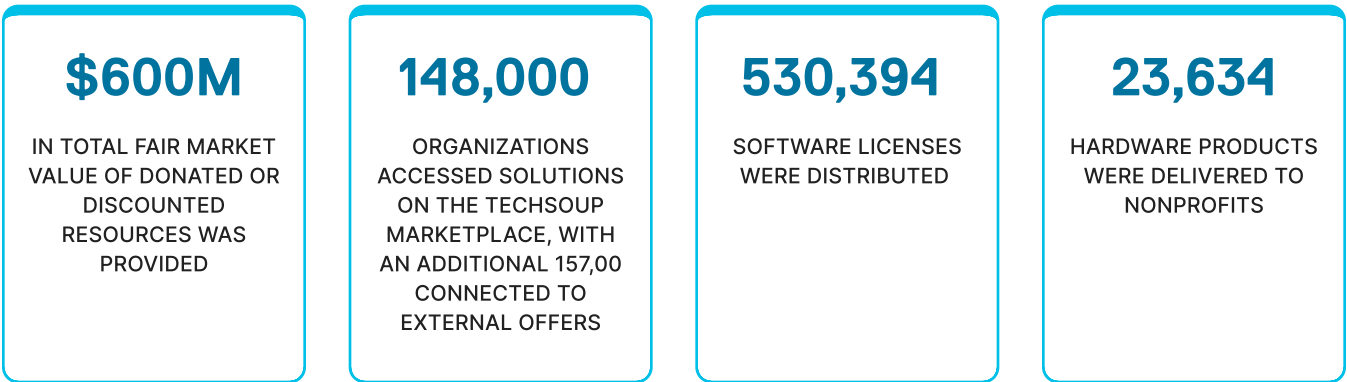

structured programs to support nonprofits in the use, development, and adoption of technology

We believe nonprofits everywhere should be able to access, adopt, and optimize technology in ways that are radically affordable. To best serve nonprofit needs in 2025, TechSoup programs sought to lower the cost of the time, money, and resources needed to make better technology decisions.

Empowering Access Through the TechSoup Marketplace

This year, the Marketplace and our enabling validation services continued to serve as a trusted and reliable source for digital solutions. In partnership with hundreds of companies, we connected **305,000 civil society organizations** with the resources they needed. Our validation services continued to define and update the eligibility standards in 238 markets globally in order to ensure a trusted pathway to distribute goods and services to charitable entities around the world.

In fiscal year 2025:

Demand for digital tools remained strong: The top five requested solutions were **Intuit** QuickBooks Online for financial management; **Adobe** products for PDFs, design, and communication; **Microsoft** products for productivity; **Zoom** Workplace for collaboration; and **Dell** hardware products. Organizations that were new to TechSoup requested similar solutions, but also focused on tools and services like **Wix** to manage their websites, **Asana** for the project management needs, and services to support their website and data needs.

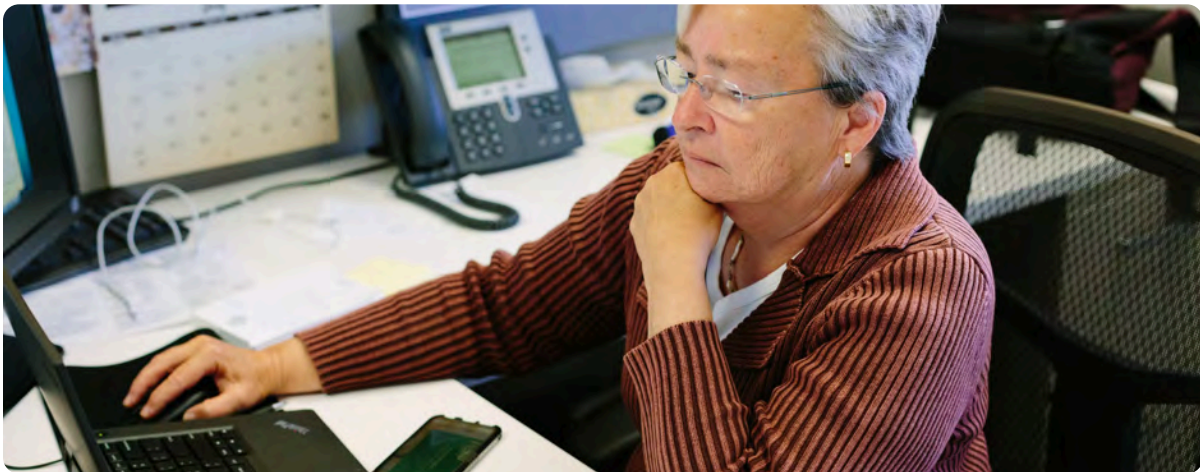

Source: Shutterstock

SPOTLIGHT

The Intuit Donation Program

The Intuit donation program at TechSoup provides Intuit's popular accounting software and services to eligible nonprofits, charities, and public libraries throughout the United States. Intuit's QuickBooks and QuickBooks Online accounting software and services help nonprofits manage finances, file form 990, and file taxes.

This year, we supported over **1,300 organizations** in migrating to QuickBooks Online through our services, helping nonprofits to better understand their finances while saving money in the process. Additionally, over **1,700 individuals** attended an educational event we produced related to nonprofit accounting and QuickBooks, with over **4,700 individuals** signing up to receive the event recordings.

80,767

QUICKBOOKS ONLINE LICENSES DELIVERED IN FISCAL YEAR 2025

"QuickBooks is the tool we use to manage our finances. We are able to quickly create custom invoices, which is a huge help. We can also track all our finances and produce reports for others to see how we are doing financially. QuickBooks is invaluable to our success."

— Bernard Rupe, TFK Chicago Voyagers Palatine

Connecting Organizations to Affordable Technology Services

Organizations worldwide need access to both technology and the services that help them implement, manage, and evaluate it effectively. We have forged strategic collaborations to deliver accessible and innovative digital services that empower nonprofits globally.

Solutions and Services

This year, we proactively expanded our service catalog to over 50 unique global solutions, launching eight new services to meet the sector's most pressing digital needs, including cybersecurity, data, digital marketing, and compliance.

These services include:

Financial services

to integrate financial tools with applications and CRM systems most used by organizations

Website services

to provide basic website design and management

Technology management

to provide Help Desk services

The Digital Resilience Program

[The Digital Resilience Program](#) (DRP) helps nonprofits accelerate digital transformation with expert support through a cohort model to identify gaps and implement technology solutions. These efforts ensure that organizations can build long-term digital resilience, equipping them to serve their communities more effectively in an increasingly technology-driven world.

Through strategic funding from partners such as Dell, Microsoft, and the Growald Climate Fund, the Digital Resilience Program scaled geographically and deepened its impact, driving **seven active projects across Europe, Africa, and the United States and including 58 nonprofit participants.**

SPOTLIGHT

Cybersecurity Focus in Asia-Pacific Region

The Digital Resilience Program supported **19 environmental organizations** across nine countries in the Asia-Pacific region through a 12-month program in fiscal year 2025. All participants received a tech needs assessment and a tailored digital transformation roadmap. The program also included foundational cybersecurity training and technical support over nine months.

Source: Shutterstock

Key results

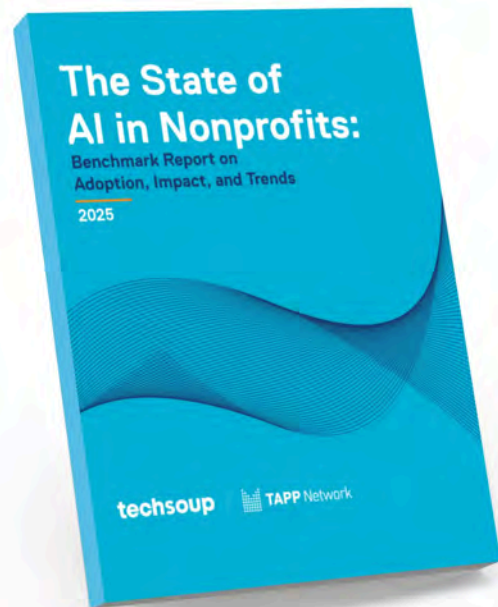

- Training **65 percent of participants** in cloud environment administration
- Providing yearlong cybersecurity awareness training
- Delivering change management training for cohort members in partnership with [Kotter International](#)
- Enabling **59 percent of participants** to implement secure platforms for project data management
- Fully migrating **41 percent of participating organizations** from vulnerable systems to secure cloud environments

By boosting digital capacity and transitioning these organizations to secure cloud platforms, we are helping them focus on driving global climate action.

Educating Nonprofit Teams

TechSoup connects nonprofit staff to the essential technical skills needed to adopt and optimize digital solutions. We offer high-quality, flexible learning formats, including benchmark reports, online courses, webinars, blog posts, and a dedicated community of practice.

This year, TechSoup worked to prepare nonprofits for the future of technology by helping them navigate the evolving digital landscape, with a particular focus on AI. In February 2025, in collaboration with Tapp Network, we published [The State of AI in Nonprofits 2025: Benchmark Report on Adoption, Impact, and Trends](#). This report explored how over 1,000 nonprofits are adopting AI, highlighted key tools and trends, and provided actionable strategies to overcome challenges and integrate AI confidently for greater impact. While 96 percent of nonprofits surveyed reported at least a basic understanding of what AI can do, 76 percent lacked a formal AI strategy.

TechSoup Courses, Blogs, and Webinars

To help nonprofits build their digital skills and leverage technology effectively, we provide over **200 courses** in multiple languages, levels, and formats, including self-paced learning, live cohort-based training, and hands-on workshops. This year, [TechSoup Courses](#) supported **3,707 active learners** enrolled in **5,490 courses**. In addition to courses, TechSoup delivered over **100 webinars** covering topics such as AI, bookkeeping, fundraising, website services, and governance, drawing over **12,000 attendees**. **Over 155,000 viewers** engaged with our [TechSoup Blog](#), featuring content on grant writing, web development, tech planning, and more.

To help nonprofits move from access to adoption and optimization, TechSoup's AI-focused training efforts in fiscal year 2025 included:

Courses

- **262 learners** completing Human-Centered AI instructor-led courses
- **16 AI-centered self-paced courses** with over 1,430 registrants
- **11 live training events** held in Europe, reaching 420 learners

Webinars

- **14 AI-centered webinars** with **7,000+ registrants**
- **3,881 participants** in Microsoft-funded AI webinars

SPOTLIGHT

Asia-Pacific AI Nonprofit Learning Community

Source: Shutterstock

The [Asia-Pacific AI Nonprofit Learning Community](#) was launched in fiscal year 2025 by TechSoup partner Infoxchange (Australia), funded by Google.org, the Asian Development Bank, and Infoxchange, to build AI capacity in nonprofits.

- **Regional support** covered over 1,100 members across Asia-Pacific.
- **Key collaborators** include TechSoup Asia-Pacific, Japan NPO Center, Kitabisa, and Nasscom Foundation.
- **Content library offerings** include over 70 guides and 80 webinars focused on AI skills and tools.
- **2026 expansion** will add content in Bahasa Indonesia, Japanese, Korean, and Mandarin, thanks to Kitabisa, Japan NPO Center, and TechSoup Asia-Pacific.

Driving Programs to Support Usage, Development, and Adoption of Technology

TechSoup develops and runs programs, with the support of funders, to support change agents in developing and implementing technology solutions for good.

TechSoup Quad

Quad is TechSoup's membership program that combines existing TechSoup membership for access to products and solutions with expert tech guidance, curated resources, and a collaborative nonprofit community to help organizations thrive. TechSoup Quad is central to TechSoup's strategy of ensuring that small nonprofits can effectively manage their technology while lowering costs and building the digital capacity needed to achieve their missions.

Membership has grown significantly:

- Membership **grew by 111 percent** year-over-year.
- The resource library has grown, with **more than 300 materials** to directly support the needs of Quad members.

"The most interesting thing about TechSoup is discovering there is a community they've built through Quad. It's been a resource for getting to know people in the field, seeking advice, and delivering value for professionals who want to give back and share their skills."

— Diyana Dobberteen, Bridging Tech

Source: Shutterstock

"Quad is a no-brainer. I can connect with the right experts when I need them, catch up on recordings, and get support that saves my nonprofit time, our most valuable resource."

— Chaplain T., The Quietly Working Foundation

Source: Shutterstock

Fostering Digital Inclusion Through Meet and Code

[Meet and Code](#) works to close the widening digital divide by introducing children and young adults to technology and coding and driving digital inclusion across Europe. It is where young Europeans take their first steps as digital creators — learning not only coding, but also problem-solving and collaboration. In fiscal year 2025, the program hosted **1,000 events** in **13 countries**, engaging **32,000 youth** and supporting **580 organizations**.

Fiscal year 2026 will mark Meet and Code's 10th anniversary, celebrating a decade of empowering the next generation with essential digital skills.

Caravan Studios: Building Technology for Public Good

Caravan Studios, a division of TechSoup, collaborates with communities to design solutions that solve local problems. In addition to [ongoing programs](#), in fiscal year 2025, Caravan developed the [Shelter Ready](#) app to expedite access to emergency shelter for unhoused individuals. Overall, Caravan programs helped connect over **1,300 individuals** to critical services, including emergency housing and safe shelter for those escaping interpersonal violence or trafficking.

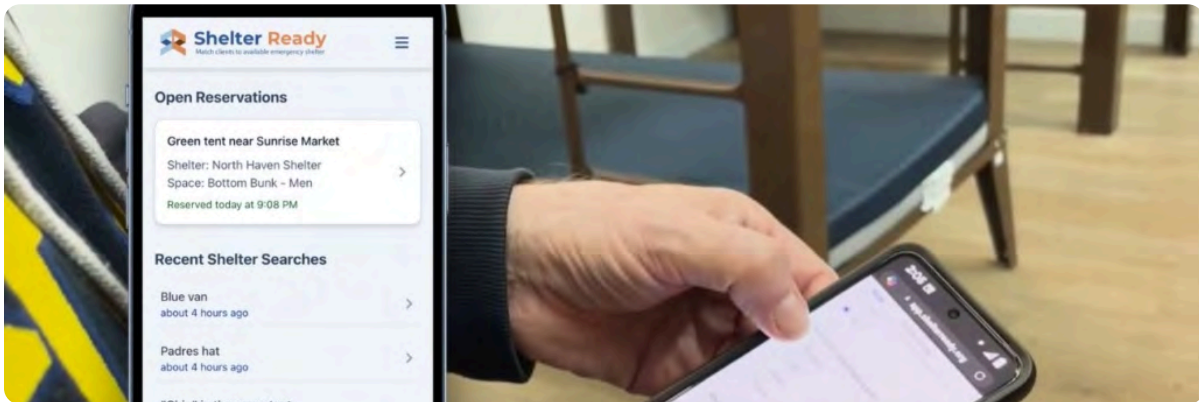

Source: [Invisible People](#)

SPOTLIGHT

Shelter Ready

Funded by the San Diego County District Attorney's Office, Shelter Ready empowers outreach workers to quickly find and reserve emergency beds for community members experiencing homelessness. Shelter Ready makes the process of finding shelter more transparent and efficient and creates a streamlined method for emergency shelters to update inventory and make shelter available to those who need it.

Source: [San Diego County District Attorney](#)

"Since implementing Shelter Ready, we have remarkably reduced our weekly hours to less than 15, although some weeks are more challenging than others. The transition from outdated paper tracking to real-time, digital tracking of referrals has been a game-changer. It has allowed us to streamline our processes and make real-time decisions with actual participants ready to enter the shelter."

— Shelter Manager

Maker Labs: Preserving Cultural Memory on the Decentralized Web

TechSoup's Maker Labs helps technology builders and nonprofits co-create purpose-built tools for public good. This year, Maker Labs launched the [Cultural Memory Lab](#) in partnership with the Filecoin Foundation for the Decentralized Web. This program piloted community-controlled archives with galleries, libraries, archives, and museums (GLAM institutions). The cohort of four organizations implemented IPFS-based storage (InterPlanetary File Storage), each uploading more than 20 archival items. Training engaged 553 GLAM institutions globally and validated a new cohort-based learning model for technology implementation.

Strengthening the Nonprofit Sector

TechSoup is committed to developing an infrastructure that supports the sector as a whole. This helps ensure that we can get resources to the organizations that need it, that the sector benefits from shared resources, and that we all have a chance to learn from each other.

This year, we strengthened the nonprofit sector through:

Streamlining Grantmaking

Enabling U.S. funders to streamline global grantmaking by providing 501(c)(3) equivalency determinations

Due Diligence Frameworks

Creating due diligence and organizational strengthening frameworks to ensure continued access to resources

Sector Intelligence

Transforming data, research, and analysis into sector intelligence briefings with unique insights

Data Commons

Opening data for the sector through Data Commons for Civil Society, powered by Google.org

Digital Activism

Building resilience of civil society organizations, activists, and educators in over 60 countries

We are dedicated to creating the robust, resilient infrastructure the entire civil society sector needs to secure vital resources and confidently navigate a complex global landscape.

Supporting U.S. Grantmakers Through NGOsource

NGOsource, a program of TechSoup and the Council on Foundations, supports U.S. grantmakers as they give to organizations outside of the U.S. It inspires a significant increase in cross-border philanthropy by centralizing, streamlining, and standardizing the equivalency determination (ED) process for U.S. grantmakers.

NGOsource maintains a repository of EDs of nearly **12,000 international NGOs** in **174 countries**. This repository saves countless hours for both donors and charities.

This year, we saw **17.4 percent growth in total EDs** over the previous year. Since its inception, we have seen individual grantmakers turn to NGOsource to find a grant-ready organization in the repository more than **14,000 times**. To date, this has saved grantmakers an estimated **\$25 million** in operational costs and over **30,000 NGO staff hours**.

SPOTLIGHT

Solidlinks Initiative for Development

Source: Shutterstock

[Solidlinks Initiative for Development](#) (SID) is a Ugandan grassroots organization focused on promoting livelihoods and food security for women and youth by working with "last mile beneficiaries." While SID effectively delivers long-lasting community impact, it often struggled to meet rigorous U.S. funder requirements. An ED through NGOsource validated SID's compliance, streamlining access to funding. EDs help funders provide crucial unrestricted support, ensuring funds reach the community efficiently.

"This was not only a review process, but rather a moment where we got guidance on how to package and present our information. We are confident that our documents now speak more clearly and can easily be understood. We are grateful to NGOsource."

— Solidlinks Initiative for Development

STEP: Creating Frameworks That Power Locally Led Development

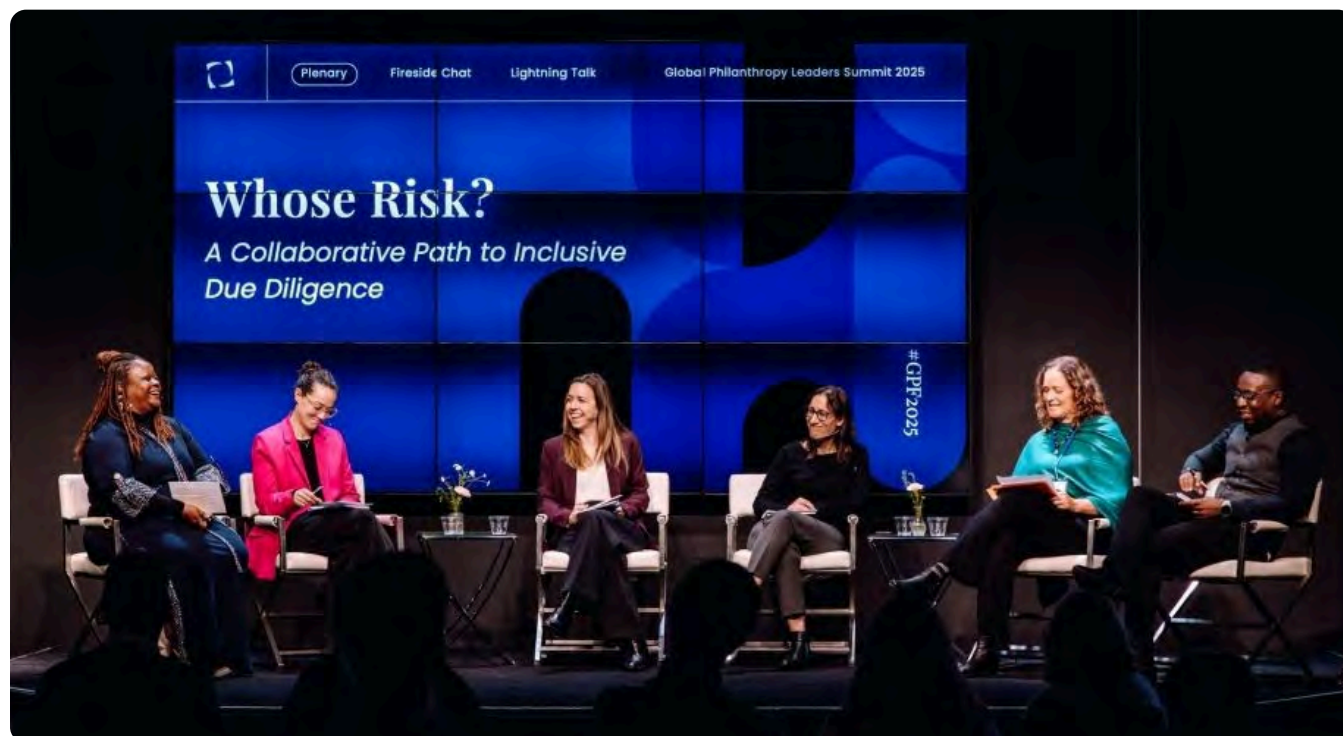

The [Strengthening and Tiered Evaluation Process](#) (STEP) is a due diligence and organizational strengthening framework designed to replace pass/fail compliance with a nuanced, tiered approach that supports growth, transparency, and trust in supporting organizations worldwide.

This innovative due diligence system is the result of more than five years of strategic ongoing investment by TechSoup and NGOsource — anticipating the need to respond to increasingly challenging political landscapes, where restrictions on civil society risk cutting off vital funding. STEP creates a mechanism to work with funders and ensure continued access to resources.

The STEP model, using a comprehensive, tiered, evidence-based evaluation approach, not only helps civil society organizations build resilience but also enables us to partner with funders — such as UK-based Amplify Change — to streamline risk assessment and confidently disburse crucial funding to hundreds of grassroots organizations worldwide.

This year:

- We supported 32 organizations as they went through the STEP evaluation in Africa and South East Asia under a working partnership with AmplifyChange.
- We worked with 44 funders to understand their due diligence requirements under the Compliance Conundrum Collective, of which TechSoup is a founding member. Insights gathered were used to improve the framework as well as influence funders to refine their due diligence requirements and practices.

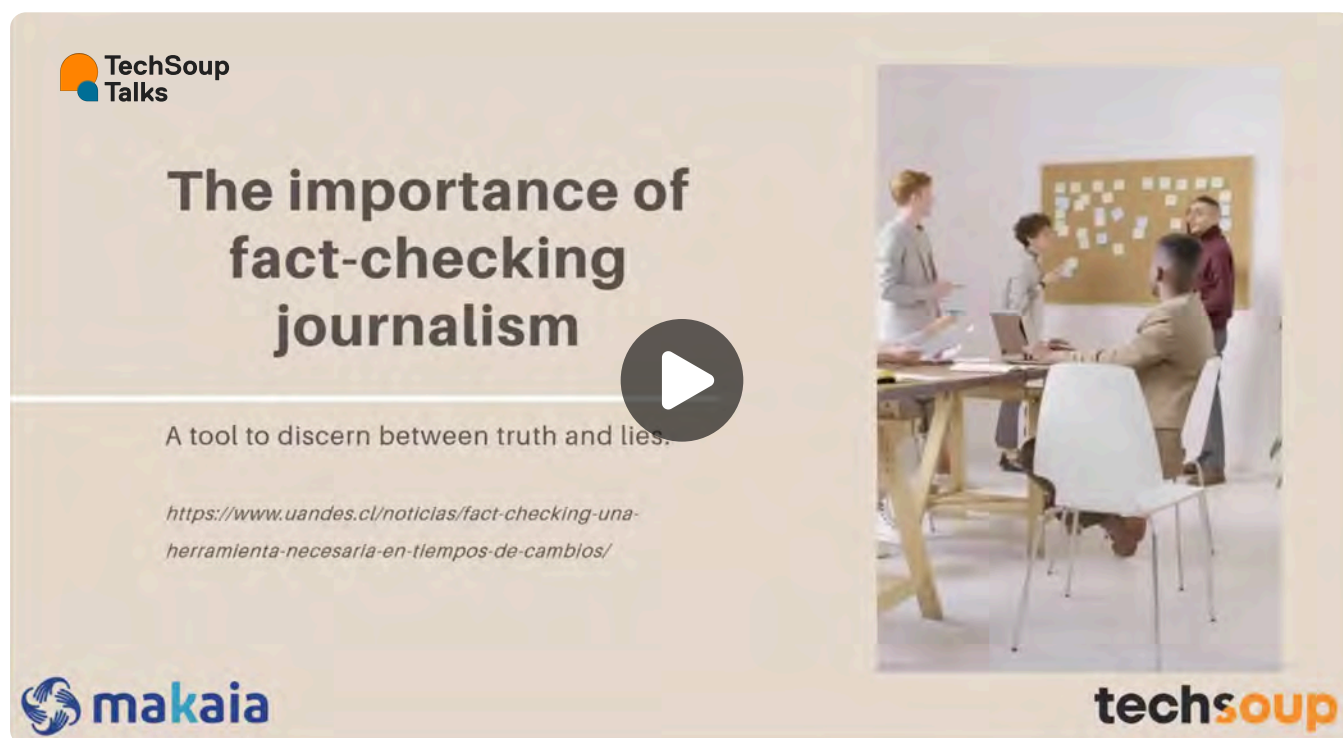

Source: Global Philanthropy Forum

Transforming Insight into Action: Sector Intelligence That Drives Impact

TechSoup invests in research and analysis that equips decision-makers with actionable insights. This intelligence supports funders and partners in making smarter investments and unlocking resources for organizations worldwide.

Launched in April 2025, the [TechSoup Talk series](#) brings together nonprofit leaders from around the world for candid, forward-looking conversations about the forces transforming our sector. Each talk explores how technology, governance, and global change are reshaping the way mission-driven organizations lead, adapt, and serve. Aimed to invite reflection and dialogue, topics include digital security, data governance, misinformation, counter-narratives, and collaboration.

Source: TechSoup

To complement our initiatives directly supporting organizations, we also launched an effort to develop well-researched briefs providing funders and partners with critical, actionable intelligence on emerging threats and guiding smarter defensive investment decisions across the philanthropic sector. These briefs are available to TechSoup partners and funders to support their decision-making in critical areas.

Opening Data: Data Commons

[Data Commons for Civil Society](#) is a powerful tool that makes it easy for nonprofits, NGOs, and other civil society organizations to find and use public data and to explore connections between datasets. This year, we used this platform and partnered with the Stanford Doerr School of Sustainability to illustrate [the impact of undergrounding power lines](#).

Building the Resilience of Civic Actors: The Digital Activism Program

Launched in 2018, the [Digital Activism Program](#) (DAP), is a comprehensive initiative across 60 countries building the resilience of civil society organizations, activists, and educators worldwide. By working with a strong network of regional and local partners, the program fosters a resilient civil society that integrates technology effectively. It nurtures a sustainable Community of Practice where civil society organizations collaborate and co-create strategies to respond to emerging societal challenges.

The program's activities are structured around five interconnected thematic areas, responding directly to the evolving needs of civil society actors:

- **Digital well-being** promotes healthy digital habits.
- **Countering disinformation** enhances digital literacy and resilience against information warfare through communication, campaigning, and depolarization.
- **Personal and organizational resilience** builds capacity to anticipate, absorb, and adapt to disruptions.
- **Safety and security** equips organizations with tools and knowledge to protect against digital threats.
- **Digital literacy** empowers civil society with the skills and understanding needed to use new technologies and AI to support their missions and navigate complexity and innovation.

Source: TechSoup

This year, we directly delivered critical capacity-building and resilience support to over **8,200 individuals**. These people, in turn, reached another **7.6 million people**, providing civil society organizations with skills and resources to counter disinformation and improve their digital resilience. It supported **14 program partners** operating in **18 countries**.

COUNTRIES

The DAP provides programming and convening opportunities to global organizations:

- The Digital Activism Accelerator successfully supported **71 organizations** across **12 Central and Eastern European countries** in gaining critical disinformation resilience through 106 training sessions and implemented **75 local actions** — grant-funded, grassroots initiatives.
- We launched **AI for Social Change**, a two-year upskilling initiative aiming to train and support **10,000 organizations** across **10 countries** in the EMEA.
- Over **200 activists** from more than **40 countries** convened through our community of practice at two major regional events: MEGAPHONE 2024 (Central and Eastern Europe) and MEGAFONO 2024 (Latin America).
- **Hive Mind**, the online learning space for digital activists, supports civil society actors in building digital resilience and fosters an international community of practice. Participants use the platform to share expertise and address local challenges with new skills and knowledge. Over **20,000 active users** visited the space in fiscal year 2025.

Source: TechSoup

SPOTLIGHT

MEGAFONO 2024

Source: TechSoup

In September 2024, MEGÁFONO Colombia took place in Medellín, Colombia. This was an international event organized by MAKAlA in collaboration with TechSoup, with the support of the Atlantic Council's Digital Forensic Research Lab (DFRLab). Under the motto "Connecting Voices of Truth," this event brought together more than **100 changemakers** in the fight against disinformation in Latin America.

MEGÁFONO 2024 created a collaborative space where activists, journalists, content creators, academics, and civil society organizations shared tools and knowledge to address disinformation. The event featured **18 experiential workshops** and created a safe space for participants to share experiences, strengthen their networks, and build a sense of community, fostering the creation of regional alliances that promote the ethical use of new technologies and media literacy in Latin America.

Financials
